AUSTRALIAN TECHNOLOGIES COMPETITION FINALIST 2014

Regen's Solar- HybridGen Technology Reaches the Finals in the Prestigious Australian Technologies Competition

Regen Power is pleased to announce that its patented Solar HybridGen™ technology has been nominated as one of the three **Finalists for the Mining Technologies Award in the 2014 Australian Technologies Competition** - http://www.austechcomp.com/

Regen has recently designed, supplied and installed a containerised Hybridgen™ Power Unit with 30kW ground mounted solar panels for BC Iron Limited (ASX: BCI) - an iron ore development and mining company with key assets in the Pilbara region of Western Australia. Solar Hybridgen™ Unit provides critical uninterrupted power supply for area lighting and traffic light signaling at the intersection of Bonnie-Downs Hill side Road and the BC Iron Haul Road connecting FMG Fortescue's infrastructure at Christmas Creek, 58 km south of the Mine, to rail the iron ore to Port Hedland from where it is shipped direct to customers overseas.

Regen also supplied two containerised Solar Hybidgen™ Power Pack for a major mining company in Boddington in Western Australia.

Hybridgen™ has also been supplied to around 1000 telecom sites in India through Regen's Indian collaborator. The innovative system reduces fuel consumption, pollution and the cost/kWh by half, making it an irresistible alternative to the conventional diesel systems in remote mining, telcom tower and communities.

Regen is collaborating with Curtin University in Solar Hybridgen research. In 2014, the Australian Research Council announced funding of $326,000 to Regen and Curtin to assist further research into this application .

The selection of the Solar Hybridgen Power Unit as Finalist in the 2014 Australian Technology Competition confirms its significant potential for the mining and telecom sector.
